WORK EXPERIENCES

The Techy Hub Studio / Studio 20

Malaysia

Front end Developer (Remote)

Dec 2023-Present

- Implemented and maintained **front-end web applications** from notable organizations such as **Football Association of Singapore, CKPartner group, Syspex, Uno Advisers**, etc by adding more contents, or features to the application, resulting in increased user experiences and web traffic to the web applications.
- **Boosted web traffic to SYL by 15%** by developing and implementing various features in SYL, which include League Fixtures and Standings Tab, Announcement Section, Academy Accreditation System (AAS) pages and Blog, as well as connecting the website to their **FMP server API** using WordPress PHP.
- Implemented enterprise level financial transaction app for **CKP Partner group** by leveraging latest technologies in web development techniques, such as **lazy loading, server-side rendering** for **enhanced page loading speed by 20%**, using latest advanced web tools such as React.js with Tanstack Query & Router supported Next.js.
- Assisted Syspex.com in implementing ad strategies using google tag manager and analytics, **resulting in increased visibility and customer understanding**, that allowed Syspex to created google ads and track the effectiveness of ad campaigns, as well as customer segmentation.
- Worked with cross-functional and multicultural teams to develop and execute on-time and on-budget projects and initiatives by effectively communicating project timeline, progress and objectives using tools such as Zoom, Discord and Clickup.

RECENT PROJECTS

CKP dashboard application | Ckpartner group

June 2024 – Present

- Developed majority of the UI components in the application utilizing the latest UI technology in web called Shadcn and React, which allows the website to be responsive and usable from any devices, enhancing the user experience on the website.
- Implemented business logics for invoices, bank statements generation and payment creation in the application using pop latest data-fetching library called Tanstack Query and Router, **which increased the page loading speed by 20%**.
- Worked together with the project team and the client in a agile process, which include daily scrum meeting, monthly meeting with the client, to align and deliver the vision of the client for the project.
- Techstack : React, Next.js, TypeScript, Shadcn, Tailwind CSS, Tanstack Query, Tanstack Router, Tanstack Table

Singapore Youth League | Football Association of Singapore

May 2024 – July 2024

- Implemented the new tabs to display the Singapore youth league clubs' fixtures and standings, by creating the template for the table based on the design provided and populating the tables by connecting the pages to their FMP API for live data update using Phase Ids.
- Worked together with the SYL client in developing the new Academy Accreditation System (AAS) pages in the website, to explain the guide line and principals AAS developed by FAS to SYL players, clubs and coaches, thus increasing the web traffic through the page views for the new pages.

- Designed and Implemented the UI components for **Announcement Section & Blog Page**, based on client feedback, and implemented the content management fields in the WordPress dashboard which allow the client to easily edit and modify the content in those pages, thus increasing the User experiences for the website.
- Tech Stack: Javascript, Ajax, JQuery, Wordpress, PHP

Singapore Premier League | Football Association of Singapore

May 2024 – July 2024

- Designed the UI and implemented the business logics for the fixtures and standing page in SPL website, based on the client requirements in the Zoom meeting, to replace the old widgets, and populate the UI by using API, developed by new partner of SPL, Sportradar.
- Created the business logics for the fixtures and standing page, by connecting the sport radar api with the UI components in the backend using JQuery and Javascript.
- Tech Stack: Wordpress PHP, Javascript , JQuery

Happie-Token

August 2024 – Present

- Primarily Developing website UI along with Rest API using Next js File routing to create a dynamic layout and web template using Shad CN components library.
- Take advantage of Next JS server side components rendering to load the webpage blazingly fast, allowing for the website to be quick at loading pages.
- Using Next JS API routing to load the data from Postgres dto and services to the website, in an instant loading allowing for faster loading and smother navigation of the web page.
- Techstack : React, Next.js, TypeScript, Shadcn, Postgres, Rest API, Server Side Rendering

SKILLS

- **Web Technologies & Frameworks:** React, JavaScript, TypeScript, Next JS, WordPress, PHP, Expo
- **Industry Knowledge :** Responsive Design, Cross-platform Development, Server side rendering
- **Library & Modules :** React Query, Tanstack, Alpine JS, JQuery
- **Soft Skills:** Excellence understanding of non-verbal communication and body languages, Fast at learning and developing new skills, enthusiastic about learning new technologies and techniques, humble at listening to more experienced people.
